

Front End Priority Tasks :

1. Emails are received in junk
2. Print Purchase Order
3. Analytics Data Sorting
4. Transaction Data changes
5. Legal/Maintenance Data Charts
6. Terminologies update
7. Client Data Update
8. Analytics Data Addition
9. Departments Enhancements
10. New Sales Data (not yet)

Explanation :

1. Purchase orders notifications are received through the junk folder in their email, this needs to be fixed.
2. Add a button below each purchase order that allows the user to print the order details in a simple good form displaying all its details.
3. In the analytics page, Add an option to sort between the data of each type of contract(priority is sales contracts)
 - a. But when sorting data, sort between :
 - all contracts
 - sales contracts (total expected revenue, total profit, total payment due)
 - all contracts except sales contracts
 - add 2 sorting options: one by date and one by contract type and to the types the purchase order(total spent on orders)
4. In the analytics page and inside the transactions page, the revenue generated by each company should be swapped with the amount that Liwan has payed to each company, so in terms no revenue is generated from companies, Liwan only pays money for these companies so they lose money. We need to calculate these expenses (just add a negative)
5. Add new data in maintenance and legal services page in form of cards in addition to pie charts.

the data that should be added in the maintenance :

 - Resolved Issues (add this data in a pie chart form in the Analytics Page)
 - Unresolved Issues (add this data in a pie chart form in the Analytics Page)
 - Resolution In Progress(only add it as a card, do not include in the pie chart)
6. I will make sure this is always correct but in case of working on new data or new pages please make sure to follow the correct terminologies

7. In the admin dashboard inside contact management and deep in create vendor :
change terminology to client instead of vendor.

Change document types to :

- Residence
- National ID

8. Add the pie charts I was talking about in point 5 but add these 2 charts in the distribution page.

9. Nobody mess with departments anymore except me

10.

These data in the future will be added to the sales contracts :

Building no

- No of floor
- Unit number
- Unit with terrace
- Unit with garden
- Final price per meter
- Discount rate
- Final sale value
- Final price per meter

Do not add them for now and await further notice.
